Direct drive load capability

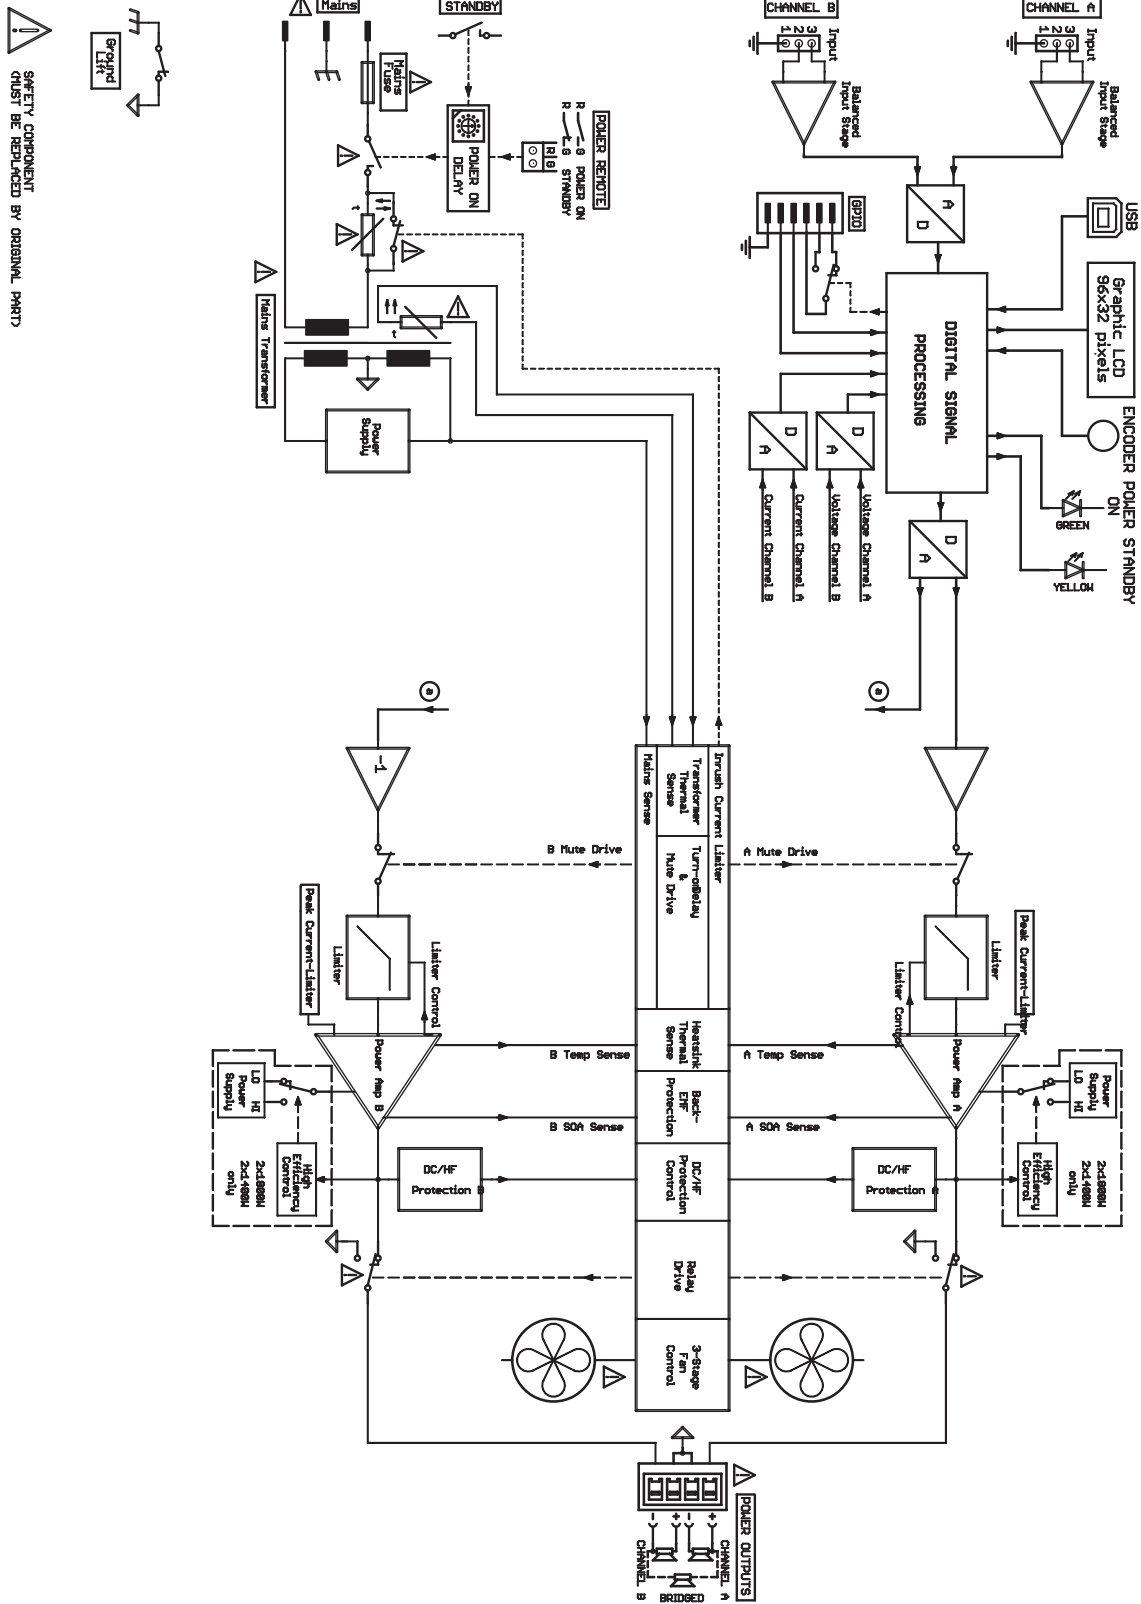

The direct drive load capability is a measure for the total wattage that can be driven in 70 V/100 V operation mode. A load capability value of 1250 watts means that this amplifier can drive e.g. 50 loudspeakers at a voltage tap of 25 watts. The dB value in parentheses indicates the delta to maximum modulation. In cases where the maximum modulation is not required you can use the smaller amplifier model.

¹This operation mode is not recommended due to the efficiency reasons. Please use the next smaller amplifier for this mode.

²Direct drive mode not available for this configuration. C3600FDi is the recommended amplifier for 100V Direct Drive. Amplifier operated in Dual Channel mode.
