

# **SPEAKERS** FOR COMMERCIAL INSTALLATIONS

November 2021

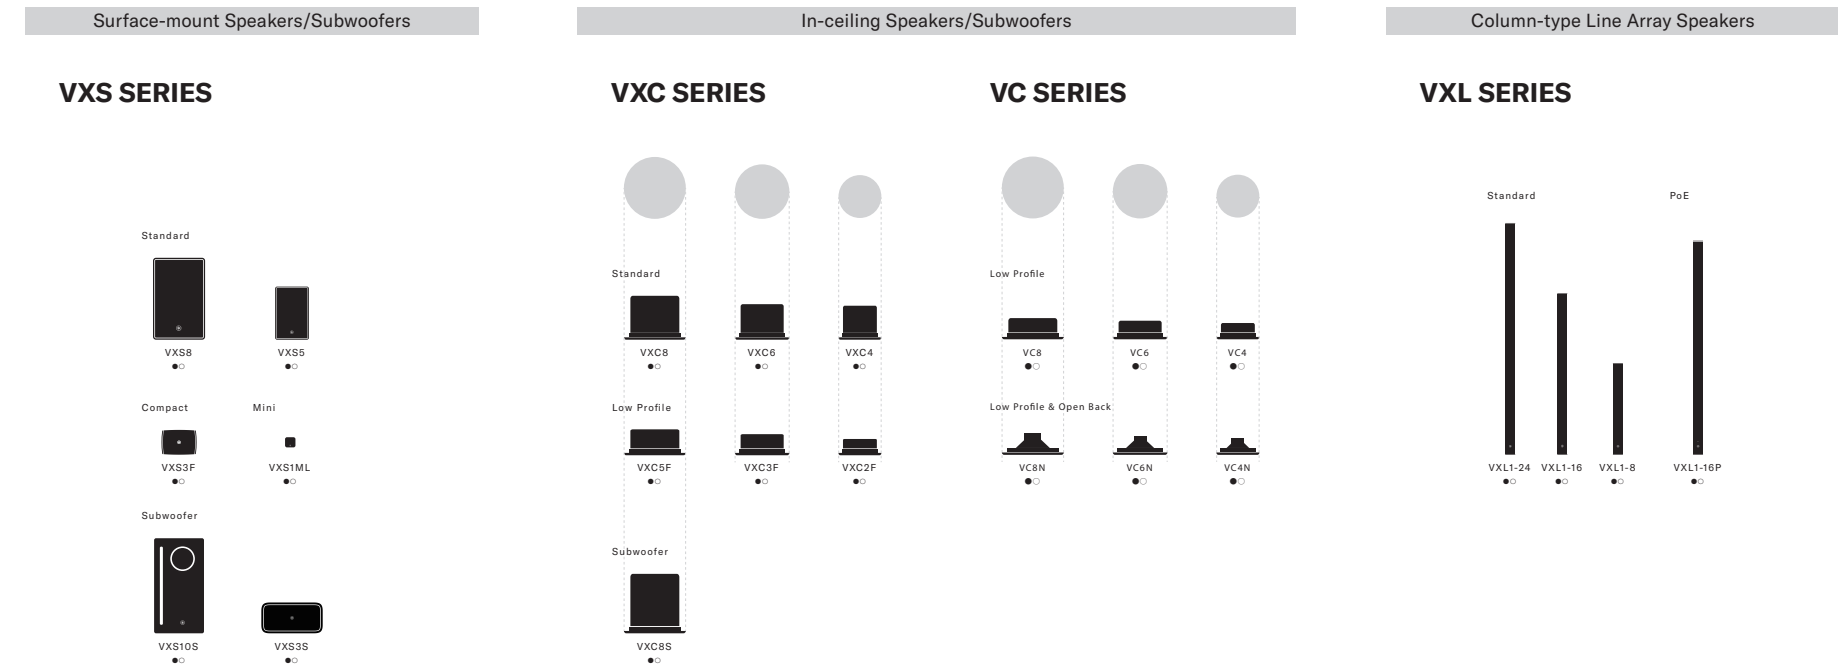

1. High quality, richly musical sound
2. Visual design that harmonizes with any interior décor
3. Installation-friendly smart mechanical features

VXS, VXC, VC and VXL series speakers have been optimized specifically for commercial sound applications, with accurate sound inspired by our long history of musical instrument production plus visual design that blends easily with any décor. Choose the models that best suit your needs from our ample lineup.

## Recommended Combinations

### For Simple Sound Systems

- MA/PA Series

#### Recommended applications:

Cafes, restaurants, bars, retail stores, classrooms, presentation rooms, etc.

### For Advanced Sound Systems

- MTX/MRX/XMV Series
- Controllers
- Peripherals

#### Recommended applications:

Conference rooms, lecture halls, restaurants, hotels, banquet halls, office complexes, multi-purpose facilities, shopping malls, etc.

# WHAT MAKES US APART

With such a prolific history of instrument manufacture comes a unique musical sensibility that deeply influences all our speaker lineups. We won't settle for anything less than truly authentic, superior sound that satisfies the most discriminating tastes.

## SOUND

We've adopted a uniquely utilitarian approach to speaker design that derives its aesthetic from the functionality of the speaker's construction so that every curve and corner serves a purpose that will ultimately benefit our customers and their clientele— with style.

## DESIGN

Our meticulous parts and material selection process and innovative proprietary technologies ensure the same level of durability and reliability as our acclaimed professional audio gear and masterfully crafted musical instruments.

## QUALITY

MAKE

IMPRESSIONS

Just like lighting, aroma, and interior design, the sounds a customer is initially exposed to can have a significant impact on their comfort and enthusiasm for your business.

Creating an inviting, high-quality sonic environment will not only complement your other stylistic choices, but influence per-customer spending and repeat business.

Yamaha is invested in the creative choices you make with your space by providing state-of-the-art products with superb musicality that ensure your vision resonates with everyone who enters.

Attractive, Discreet Design for  
Elegant Spaces

It is our goal to offer the most pleasing environments possible, both sonically and visually. The sleek curves and attractive, minimalist design of VXS series make them easily adaptable to any commercial environment seeking a unique, subtle complement to the overall aesthetic.

Safe and Efficient Installation

The brackets supplied with the VXS series are all you need for smooth, streamlined wall or ceiling mounting. The bracket itself is a compact design that facilitates mounting in tight spaces, while incorporating features for safe, efficient installation.

VXS8/VXS5

VXS1ML

A press-in bracket design leaves both hands free for easy wiring and angle adjustment.

Reverse-thread screws and safety pin prevent damage or injury due to the speaker accidentally falling during installation.

A design that prevents lateral movement during ceiling installation simplifies vertical angle adjustment.

Align the speaker to the notch on the mounting bracket, and then attach the speaker. Secure the speaker by turning it clockwise.

Featured Model

Good Things. Small Packages.

Mini Surface-mount Speaker  
**VXS1ML** (VXS Series M)

Bigger isn't always better, and for more intimate commercial environments in particular, a subtle approach to the sights and sounds your customers experience can often leave a stronger impression. Yamaha's ultra-compact VXS1ML provides an attractive interior accent, while filling your space with music that helps shape your overall aesthetic and inspires your clientele.

Blending into Any Décor

A remarkably small cube with elegantly flowing lines and surfaces.

Room-filling Sound Experience

Carefully selected and tuned 1.5" driver with neodymium magnet, realizing wide coverage.

Installation Friendly

Wall-mount, ceiling mount, In-ceiling\*, or hanging from lighting rail\*.

\*with optional accessories

Recommended Subwoofer: VXS3S

In situations where more substantial low end is required, the compact VXS3S subwoofer is a perfect match for the VXS1ML. Featuring unique SR-Bass™ technology, the VXS3S delivers impactful bass performance while reducing the enclosure size.

VXS1ML

VXS3S

Tips for System Design & Installation

Speaker Layout

The coverage area of surface-mount speakers will depend on the mounting height rather than ceiling height. With surface-mount speakers installed at a height of around 3 meters, the coverage area will be somewhere between 5 and 7 meters, as shown in the below figure.

Higher speaker mounting positions will result in larger coverage circles: between 1 and 2 meters increase in diameter for every 1 meter in height, approximately.

Speaker mounting position:  
around 3m height

Uniform sound pressure level can easily be achieved throughout the listening plane with speakers that include by aligning the speaker's axis with the head of the most distant target (listener). This works because of the relationship between distance and coverage angle. When the perpendicular axis is aligned with the last row, the natural distance attenuation at the last row and the off-axis attenuation at closer rows tend to result in uniform SPL distribution.

\*Yamaha provides dedicated speaker software application CISSCA for designing simple installation such as in-store background music system. Please see page 12 for the details.

Satellite Connection

The VXS10S/VXS3S subwoofers have satellite connectors on the rear panel, minimizing the number of amplifier channels required to get a system up and running. And since the subwoofers support high-impedance connections, it is possible to connect low-impedance satellite speakers while the subwoofer is connected to a high-impedance system. A built-in high-pass filter is automatically applied to the satellite speakers, providing exceptionally smooth, natural frequency crossover from subwoofer to satellites.

Basic system Multiple satellite systems can be structured using a single amplifier channel.

In-ceiling Speakers/Subwoofers

# VXC SERIES

Recommended for  
**Background Music System**

## Smart Design for Safer, Faster Installation

The VXC ceiling speakers come with smart mechanical features that contribute to significantly safer, faster installation. And since these models support both low-impedance and high-impedance connection, the need for extra stock is minimized and systems can be designed to ideally meet the requirements of any application.

### Portable

A built-in "Carrying Band" not only makes the speaker easy to carry around, but also increases safety when working on a stepladder.

### Fast

Double threaded screws used for the speaker clamp mechanism allow the clamps to be tightened twice as fast as conventional screws.

### Streamlined

The supplied speaker grilles are firmly and elegantly held in place by powerful magnets. An anti-drop wire is also included.

### Secure

An "Anti-Drop Tab" mechanism securely holds the speaker in place so that the installation can proceed safely and efficiently. There's also a release lever that allows the speaker to be smoothly removed from the ceiling as required.

### Hi-Z or Lo-Z

Both high-impedance and low-impedance connections are supported, and speaker wattage can be easily switched even after installation.

### Paintable

The supplied grilles can be painted any color to match interior decor.

## Carrying Band

## Anti-Drop Tab

## Featured Model

### Style and Substance.

Low-profile In-ceiling Speaker  
**VXC2F** (VXC Series F)

Featuring a newly designed speaker driver unit, optimally tuned for music playback, the VXC2F's super slim, lightweight construction and flexible design can easily adapt to the strictest installation limitations, ensuring superb audio performance wherever they're placed. It allows you to streamline the installation process and seamlessly integrate high-quality audio into a restaurant, retail, or professional environment, which proves that style and substance aren't always mutually exclusive.

### Super Slim Back Can

A back can less than 76.2mm/ 3 inches deep, which directly contributes to flexible installation.

### Streamlined Design

Grilles with minimum rim width, available in black or white, and removable logo.

### Pendant-mount Option

Suspension hardware and loudspeaker cosmetic cover designed for hanging from open ceilings.

### Recommended Subwoofer: VXC8S

Yamaha also offers an in-ceiling subwoofer that ideally matches for VXC series speakers, smoothly extending the low frequency range with superb sonic quality without spoiling interior design.

## Tips for System Design & Installation

### Speaker Layout

It is important to note that the nominal coverage angle listed in ceiling speaker specifications is not the same as the speaker's actual effective coverage angle. SPL at the nominal coverage angle is 6dB lower than the on-axis SPL, measured at a constant distance from the speaker. The effective coverage angle is defined as the angle at which the SPL is 6dB lower than the on-axis SPL at the listening plane. The effective coverage angle is usually about 70~80% of the nominal coverage angle.

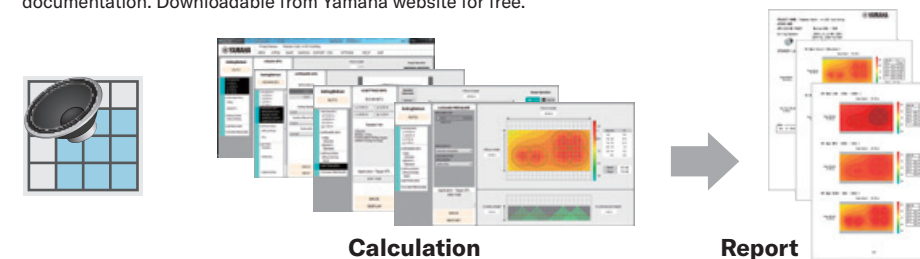

A number of methods can be employed when laying out speaker coverage areas. The "Edge to Edge" method is normally used for background music systems. The chart lists approximate coverage areas at a number of ceiling heights for standing listeners (listener ear height = around 1.5 meters). If the ceiling height is 3 meters, the coverage area will be approximately 4 meters. In this case a ceiling speaker spacing of 4 meters will provide uniform coverage with minimal volume variation.

### CISSCA

CISSCA, the Commercial Installation Solutions Speaker Calculator, is a Yamaha's dedicated software application that rapidly calculates the number of speakers required for optimum performance in installations, based on the size of the room, type of system, type of speakers, and speaker layout pattern. Output also includes an estimate of effective sound pressure level. CISSCA also has a "Report" function that makes it easy to create documentation. Downloadable from Yamaha website for free.

Column-type Line Array Speakers

# VXL SERIES

Recommended for  
**Speech/Presentation System**

## Blending Quality Sound with Visual Elegance

Ultra slim 54mm width appearance thanks to the small 1.5" driver shared with VXS1ML yet redesigned with a large voice coil, delivering distortion-free sound over a broad band of playback frequencies.

54mm

## Outstanding Projection and Clear Sound Reinforcement

A line-array configuration significantly reduces the amount of reflection at the ceiling and floor surfaces, which means sound pressure is affected less by distance. As a result, clearer, more consistent sound can be delivered to back-of-house without making front-of-stage excessively loud.

## Less Feedback Noise

With line-array speakers the per-unit output is smaller than with point-source speakers, meaning that a microphone positioned nearby picks up less sound energy.

## Tips for System Design & Installation

### Vertical Coverage Expansion

The VXL1-16 and VXL1-24 feature special rear-panel switches that allow the lower vertical dispersion of the array to be easily expanded without having the angled speakers. This improves coverage at the front of the listening area in situations where the speakers are installed at a high location.

\*VXL1-8's vertical dispersion is fixed

### Double Speakers

#### Vertical Coupling

For increased SPL and extra projection.

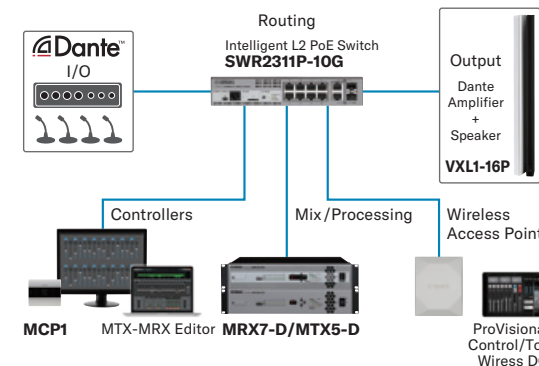

#### Horizontal Coupling

For increased SPL and more focused coverage that can minimize unwanted reflections from nearby surfaces.

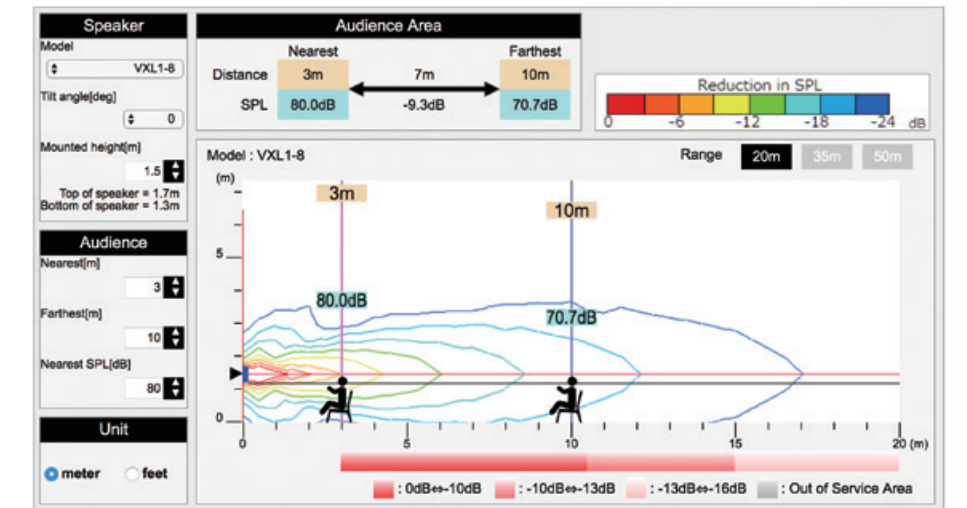

### Dante+PoE Solution (VXL1-16P)

With audio distributed via a Dante network and PoE power supplied from a PoE compliant L2 switch, the speaker system can be constructed as a network. Simple wiring via LAN cables, easy installation, and no need for a power amp contribute to the flexibility of installation, allowing you to construct an elegant space-saving sound system.

### VXL Selection Assistant

VXL Selection Assistant is a dedicated app available for free on Yamaha website, which is intended to assist the selection of the most appropriate VXL speaker model for speech reproduction applications. The App will provide an indication of whether good amplified sound can be provided across the audience area by calculating the difference in SPL between the nearest and furthest audience members. Good amplified sound can be expected if the SPL range across the audience area is within 10 dB.

The following shows a quick reference guide for appropriate selection of the VXL series.

	Distance D
VXL1-8	9.5m (31 feet)
VXL1-16	13.5m (44 feet)
VXL1-24	25m (82 feet)

\*Distance from the speaker to the nearest audience: 3m  
\*Distance from the floor to the bottom of the speaker: 1.1m

For much larger space, the use of double speakers in vertical coupling is recommended.

	Distance D
VXL1-16 + VXL1-16	33m (108 feet)
VXL1-24 + VXL1-16	42m (138 feet)
VXL1-24 + VXL1-24	46m (151 feet)

\*Distance from the speaker to the nearest audience: 4m  
\*Distance from the floor to the bottom of the speaker: 1.1m

D: Distance from the speaker to the farthest audience\*

\*The SPL difference between the nearest and the farthest is within 10dB SPL.

Switch Model	Standard Ports	PoE Ports
VXL1-24	24	24
VXL1-16	16	16
VXL1-8	8	8

## Premium Sounding Compact Ceiling Speakers at a Non-Premium Price.

VC series ceiling speakers for commercial installations deliver excellent sound quality at a price point traditionally reserved for economy speakers. A total of six models, three with back cans and three without, feature elegant low-profile designs that can be install easily even in limited ceiling or wall spaces. Large mounting clamps with non-slip treads ensure secure mounting.

**Fast**  
Double threaded screws used for the speaker clamp mechanism allow the clamps to be tightened twice as fast as conventional screws.

**Hi-Z or Lo-Z**  
Both high-impedance and low-impedance connections are supported, and speaker wattage can be easily switched even after installation.

**Lightweight**  
Reduced weight increases installation flexibility while lessening the burden on installation personnel.

**Portable**  
A built-in "carrying band" not only makes the speaker easy to carry around, but also increases safety when working on a stepladder.  
\* VC8B, VC8W, VC6B, VC6W, VC4B, VC4W only

**Paintable**  
The supplied grilles can be painted any color to match interior decor.

### Versatile lineup for a variety of requirements

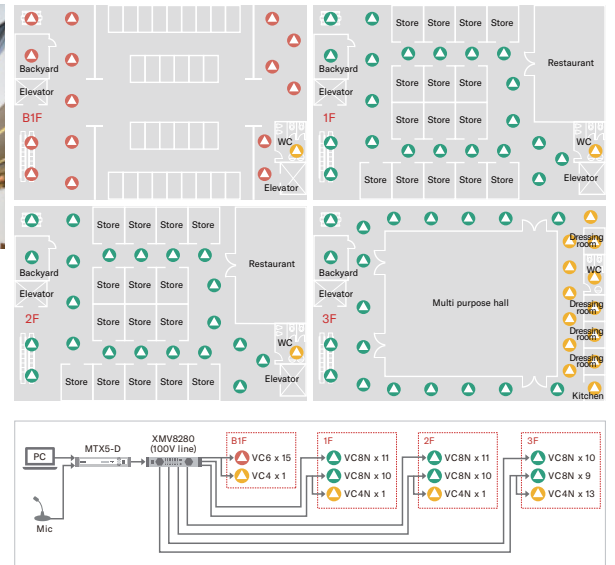

### Extremely Low-profile

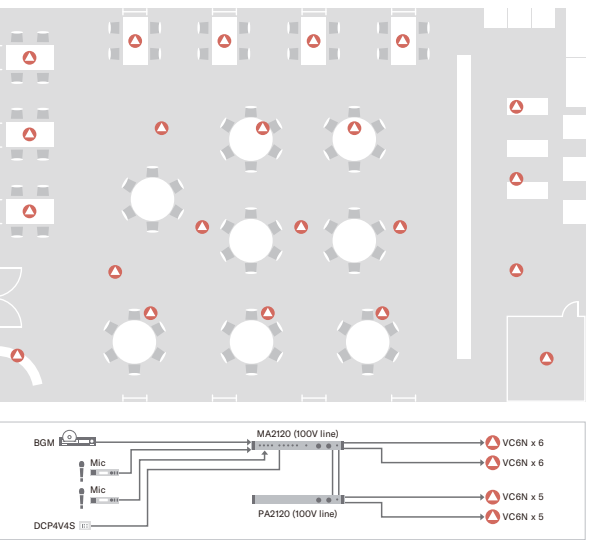

## System Example

### Large Shopping Mall

### Restaurant

### Meeting space

Optional Accessories

Low Profile

Low Profile & Open Back
